

TWS/Graph

Netplans and Barcharts for "TWS for Distributed"

As a user of TWS, you know how important these systems are for planning, automation, and control of your batch processing. With perhaps hundreds or thousands of jobs running every night, TWS is critical to the completion of your batch production.

However, as projects grow, they become harder and harder to manage. When you are faced with problems, change requests or simply the need to have TWS and TWS information available: TWS/Graph is the only choice.

TWS/Graph - The new view to TWS

TWS/Graph displays your TWS data in a way you have never seen before: Schedules, jobs, follows, files, needs and resources etc. are shown as easy to understand netplans and barcharts.

Use TWS/Graph to distribute TWS information, even via the Internet or Intranet. Use any Browser to access TWS information from anywhere at anytime. Visit our homepage and see an example: www.horizont-it.com.

TWS/Graph

Netplans and Barcharts for "TWS for Distributed"

Areas of application

TWS/Graph is the program for anyone who needs information about TWS definitions, and information from the current production cycle.

- Production planning
- Production control
- Application programmers
- Non IT departments
- Project and test teams

Data

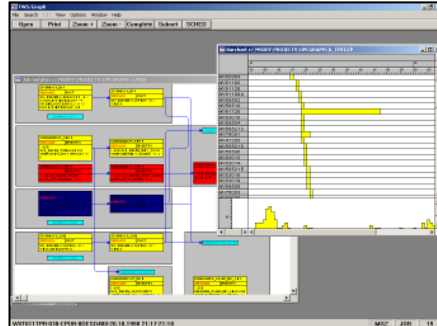

TWS/Graph allows access to data from Mozart and Symphony files.

- Schedules
- Jobs
- Follows
- Resources
- Files
- Prompts
- Resolved parms
- Job runtimes history

Offline Usage

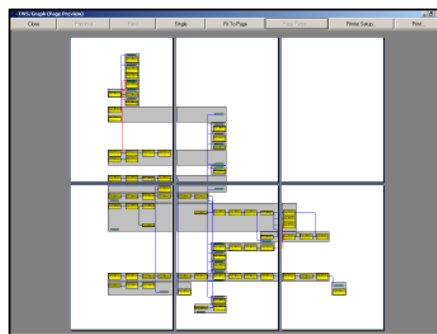

TWS/Graph can be used without having any connection to the TWS Master or Consoles. Anytime and Anywhere!

- Allows you to give TWS information to departments without giving them access to live data.
- Allows you to modify TWS schedules with no impact to live data.
- Allows you to create new TWS schedules without cryptic line commands.

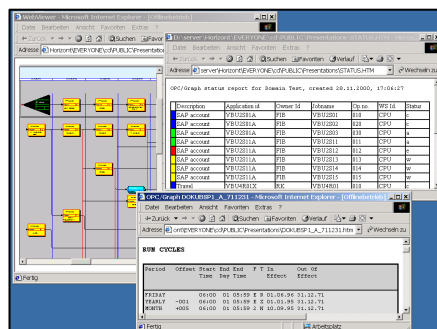

Netplans and Barcharts

Your information is presented as an easy to understand netplan or barchart. Symbols can be customised for clarity and convenience.

Print graphics

TWS/Graph supports all printers or plotters. Create easy to read printouts for your daily work, for project groups, for departments or anybody who needs clear information about your production.

Intra- and Internet

TWS/Graph supports your Web Browser in various ways: Use the WebViewer to distribute netplans and barcharts, or create JPEG and GIF graphics from your TWS definitions.
